Introducción

La Contraloría General de la República, a través del Instituto Nacional de Estadística y Censo (INEC), pone a disposición de sus usuarios la revisión de las estimaciones y proyecciones de la población urbana y rural de la República, para el período 2010 - 2035, desagregado por provincia, comarca indígena, sexo y grupos de edad. Este documento constituye el marco de referencia demográfico actualizado, tras la ejecución de los Censos Nacionales de la década 2020.

El marco metodológico que sustenta este trabajo se alinea con las directrices desarrolladas por el Centro Latinoamericano y Caribeño de Demografía (CELADE), división de población de la CEPAL, a partir de la evolución histórica de la función logística de Naciones Unidas. Como insumo empírico fundamental, se emplean los Censos Nacionales de Población y Vivienda de las rondas de 2010 y 2023, levantados por el INEC, los cuales actúan como los pivotes analíticos del modelo.

Entre los componentes metodológicos clave que se detallan en el texto, destacan la asignación de asíntotas específicas para Panamá según su nivel de urbanización (rango de 50% a 70%), la proyección desagregada por cohortes de edad y el tratamiento metodológico especial para los territorios comarcales, cuya naturaleza rural actual condiciona un comportamiento demográfico particular.

1. Metodología utilizada

1.1 Objetivo y alcance del documento

El presente documento expone la metodología y los resultados de las estimaciones y proyecciones de la población urbana y rural de la República de Panamá para el período 2010 - 2035, desagregadas por provincia, comarca indígena, sexo y grupos de edad. El ejercicio se enmarca en la metodología desarrollada por el Centro Latinoamericano y Caribeño de Demografía (CELADE), división de población de la Comisión Económica para América Latina y el Caribe (CEPAL), adaptada a la disponibilidad de información censal del Instituto Nacional de Estadística y Censo (INEC) de Panamá.

El objetivo central es ofrecer un insumo técnico para la planificación nacional y subnacional, permitiendo anticipar la futura demanda de servicios básicos en salud, educación, vivienda, infraestructura, diferenciada por área de residencia, así como apoyar el diseño de políticas públicas con base empírica desagregada territorialmente.

1.1 Fuentes de información

La base empírica de las proyecciones proviene de los censos nacionales de población y vivienda de Panamá correspondientes a las rondas de 2010 y 2023, levantados por el INEC. Estos dos censos constituyen los “pivotes” que ajustan los parámetros del modelo logístico utilizado para proyectar el porcentaje de población urbana de cada provincia y comarca indígena hacia el horizonte 2035, conforme a la actualización metodológica más reciente de CELADE-CEPAL.

1.3 Cobertura territorial

El ejercicio cubre la totalidad del territorio nacional, desagregado en los siguientes niveles:

- República de Panamá (nivel nacional)
- Provincias: Bocas del Toro, Coclé, Colón, Chiriquí, Darién, Herrera, Los Santos, Panamá, Panamá Oeste y Veraguas
- Comarcas indígenas: Comarca Kuna Yala, Comarca Emberá y Comarca Ngäbe Buglé.

Para cada una de estas 14 unidades territoriales, los resultados se presentan por sexo, (hombres y mujeres), y por grupos quinquenales de edad, con desagregación adicional en edades simples para los grupos 0 a 4, 5 a 9, 10 a 14 y 15 a 19 años.

2. Metodología CELADE - CEPAL

2.1 Fundamento teórico: la función logística de Naciones Unidas

Las proyecciones de población urbana y rural por sexo y grupos de edad utilizadas en este documento se sustentan en la metodología desarrollada por el CELADE-División de

Población de la CEPAL, originalmente propuesta por Naciones Unidas en 1975 en el Manual VIII, “Métodos para hacer proyecciones de la población urbana y rural”.

Esta metodología se caracteriza, fundamentalmente, por ser simple, flexible, replicable y de fácil asimilación. Su principal ventaja frente a métodos más sofisticados, como el método de los componentes aplicado por área de residencia de la población, es que requiere únicamente información en dos momentos censales, lo cual resulta apropiado dada la disponibilidad y calidad variable de los datos en los países de la región.

El método parte del supuesto de que existe una diferencia constante entre las tasas de crecimiento de la población urbana y la población rural, lo que implica que la evolución del porcentaje de población urbana en el tiempo sigue un comportamiento de tipo logístico.

2.2 Especificación del modelo y parámetros

El modelo logístico adoptado por CELADE-CEPAL tiene la siguiente especificación:

$$\%U_t = K_1 + K_2 / (1 + e^{a+bt})$$

donde:

- %Ut = porcentaje de población urbana en el momento t
- K1 = asíntota inferior
- K1 + K2 = asíntota superior
- a, b = parámetros estimados a partir de los pivotes censales
- t = tiempo (año calendario)

La aplicación directa de la función logística clásica de Naciones Unidas, con asíntota inferior de 0% y superior de 100%, presentó dos problemas relevantes al aplicarse de forma masiva a los países de la región:

- En países con alto nivel de urbanización en el punto de partida, las proyecciones alcanzaban, al final del período, porcentajes de población urbana excesivamente elevados.
- En países de bajo nivel de urbanización, el porcentaje proyectado podía aumentar de forma exagerada como consecuencia de un ritmo de crecimiento urbano observado entre los dos últimos censos que no necesariamente reflejaba una tendencia estructural sostenible, sino diferencias en las definiciones censales, falta de comparabilidad entre censos o circunstancias coyunturales.

2.3 Asíntotas inferior y superior por nivel de urbanización

Para resolver estas limitaciones, CELADE-CEPAL clasificó a los países de América Latina en cinco grupos según su nivel de urbanización observado en el segundo pivote censal, asignando a cada grupo un par de asíntotas, (inferior y superior), diferenciadas por sexo,

que constituyen límites teóricos hacia los cuales tiende la trayectoria de cada país en el muy largo plazo:

ASÍNTOTAS INFERIORES Y SUPERIORES SEGÚN SEXO, POR NIVEL DE URBANIZACIÓN DEL PAÍS

Nivel de urbanización (segundo pivote)	Asíntota inferior (Hombres)	Asíntota superior (Hombres)	Asíntota inferior (Mujeres)	Asíntota superior (Mujeres)
≥ 90%	33	98	35	99
≥ 80% y < 90%	26	95	28	96
≥ 70% y < 80%	20	90	22	91
≥ 50% y < 70%	20	85	22	87
< 50%	10	80	13	82

Panamá se ubica, según el pivote censal más reciente considerado por CEPAL en su Observatorio Demográfico 2023, en el grupo correspondiente al rango de urbanización entre 50% y 70% para ambos sexos, con asíntotas de 20% - 85% para hombres y 22% - 87% para mujeres a nivel nacional.

2.4 Selección de pivotes censales

Una vez fijadas las asíntotas K_1 y K_1+K_2 , es necesario conocer el porcentaje de población urbana en dos momentos distintos a fin de determinar los parámetros restantes (a , b) de la ecuación logística. Estos dos valores observados se denominan “pivotes”.

Como se señaló previamente, para Panamá, los pivotes utilizados corresponden a los censos nacionales de población y vivienda de 2010 y 2023, lo que es consistente con la recomendación metodológica más reciente de CELADE-CEPAL de adoptar como pivotes los dos censos más recientes cuando ambos están disponibles.

Este procedimiento se aplicó de forma independiente para cada una de las 10 provincias y, con las salvedades metodológicas que se detallan en la sección 2.6, para las 3 comarcas indígenas, generando un conjunto de parámetros (K_1 , K_2 , a , b) propio para cada unidad territorial y cada sexo.

2.5 Proyección por sexo y grupos de edad

La proyección del porcentaje urbano total por sexo, descrita en las secciones anteriores, constituye el primer nivel del modelo. Para obtener la proyección desagregada por grupos quinquenales de edad, CELADE-CEPAL aplica un procedimiento adicional que también sigue un comportamiento logístico y que reproduce, por construcción, el porcentaje urbano total ya proyectado:

- A partir de la proyección de la población urbana y rural total, se determinan las tasas de crecimiento medio anual de ambas poblaciones y, por lo tanto, su diferencia: $d = r_u - r_R$.

- Para cada grupo de edad, se proyecta el porcentaje urbano en el momento t aplicando dicha diferencia de tasas al porcentaje urbano observado en el momento inicial.
- Las poblaciones proyectadas de cada grupo de edad se suman y, si existe una diferencia, habitualmente muy pequeña, respecto de la población total previamente calculada, se realiza el prorrateo correspondiente para garantizar el cuadro exacto.

Este procedimiento se repite para cada año del período de proyección, generando series anuales consistentes de población urbana y rural por sexo y grupo de edad.

2.6 Tratamiento de las comarcas indígenas

Las tres comarcas indígenas de Panamá: Kuna Yala, Emberá y Ngäbe Buglé, presentan una particularidad metodológica relevante: de acuerdo con los criterios censales del INEC, ninguna localidad dentro de estos territorios cumple los criterios de clasificación como “área urbana”, tanto en el censo de 2010 como en el de 2023.

En consecuencia, el porcentaje de población urbana observado en ambos pivotes censales es 0% para las tres comarcas. La aplicación mecánica del modelo logístico en este caso es trivial: dado que ambos pivotes son idénticos (0%), no existe variación a proyectar y el porcentaje urbano se mantiene en 0% durante todo el horizonte 2010 - 2035. Toda la población de las comarcas indígenas se clasifica, por tanto, como población rural en la totalidad del período de proyección.

Este tratamiento no constituye una limitación del modelo, sino el resultado consistente de aplicar la definición censal vigente a un contexto territorial donde la organización del poblamiento, de carácter disperso y comunitario, no genera, hasta el momento, núcleos que satisfagan los criterios cuantitativos o cualitativos de urbanidad empleados por el INEC.

3. Ajustes metodológicos aplicados al caso de Panamá

3.1 Validaciones de consistencia interna

Previo a la publicación de los resultados, el conjunto completo de proyecciones fue sometido a tres validaciones de consistencia interna, verificadas para la totalidad de las 62.608 combinaciones de unidad territorial, año, sexo y edad simple que integran la base de proyecciones:

- Cuadre horizontal: para cada combinación de año, sexo y edad, la suma de la población urbana y la población rural debe ser exactamente igual a la población total. Esta validación no presentó ninguna discrepancia.
- Cuadre vertical: para cada combinación de año, sexo y edad, la suma de la población de las 10 provincias y las 3 comarcas indígenas debe ser exactamente igual a la población total nacional. Esta validación tampoco presentó discrepancias.

- No negatividad: ninguna celda de población total, urbana o rural debe presentar valores negativos en ningún año del horizonte de proyección. Esta condición se verificó en la totalidad de la base.

El cumplimiento estricto de estas tres validaciones garantiza que los resultados presentados en este documento son aritméticamente consistentes en todos sus niveles de desagregación.

3.2 Ajuste de asíntotas para Darién: justificación técnica y resultado

La provincia de Darién presenta el nivel de urbanización más bajo del país, con un 10,2% de población urbana según el censo de 2023. Este valor se encuentra por debajo de la asíntota inferior estándar que CELADE-CEPAL asigna a la categoría de países (o, en este caso, provincias) con nivel de urbanización inferior al 50%, fijada en 10% para hombres y 13% para mujeres (véase el Cuadro 1, sección 2.3).

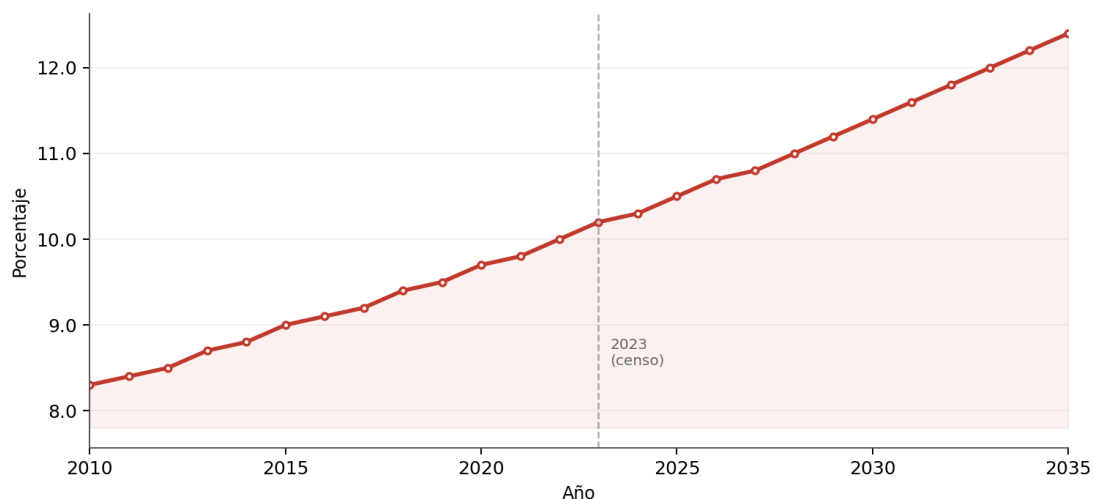

Cuando el porcentaje urbano observado en el segundo pivote censal es inferior a la asíntota inferior estándar, la aplicación mecánica del modelo logístico genera un comportamiento inconsistente: al forzar ambos pivotes hacia el valor mínimo permitido por la asíntota, la curva proyectada presenta un salto artificial entre el último valor observado y el primer valor proyectado, en lugar de una trayectoria suave y continua.

Para resolver esta inconsistencia, se aplicó un ajuste específico de las asíntotas para la provincia de Darién, sustituyendo los valores estándar por una asíntota inferior de 3% y una asíntota superior de 50%, tanto para hombres como para mujeres. Esta decisión se fundamenta en dos consideraciones:

- Darién es una provincia fronteriza con un patrón de poblamiento predominantemente rural, asociado a procesos de colonización agrícola y a un peso demográfico significativo de población rural dispersa, lo que hace plausible un nivel de urbanización estructuralmente baja y sostenida en el largo plazo.
- Los datos censales muestran una tendencia ascendente moderada y sostenida de urbanización de 8,3% en 2010 a 10,2% en 2023, que un piso teórico de 3% permite representar de forma suave y continua, sin alterar la dirección de la tendencia observada.

Con este ajuste, la trayectoria proyectada para Darién resulta monótonamente creciente, sin discontinuidades, evolucionando de 8,3% en 2010 a 10,2% en 2023 y alcanzando 12,4% en 2035, como se observa en el Gráfico 1.

Gráfico 1. TRAYECTORIA PROYECTADA DEL PORCENTAJE URBANO EN LA PROVINCIA DE DARIÉN CON EL AJUSTE DE ASÍNTOTAS ($K_1=3\%$, $K_1+K_2=50\%$): 2010-35

Es importante señalar que este ajuste modifica únicamente los límites teóricos de muy largo plazo del modelo logístico (las asíntotas), pero no altera en ningún momento los valores observados en los pivotes censales de 2010 y 2023, que se mantienen como datos de entrada exactos del modelo. El ajuste garantiza, por tanto, que la proyección sea internamente consistente sin comprometer la fidelidad a la información censal observada.

4. Resultados nacionales

4.1 Evolución de la población total, 2010–2035

La población total proyectada de la República de Panamá presenta un crecimiento sostenido, pero con desaceleración progresiva durante el período 2010 - 2035. Partiendo de 3,626,670 habitantes en el censo de 2010, la población alcanzó 4,496,166 habitantes en el censo de 2023, y se proyecta llegará a 4,978,651 habitantes en 2035.

**EVOLUCIÓN DE LA POBLACIÓN TOTAL,
DEL 2010 AL 2035**

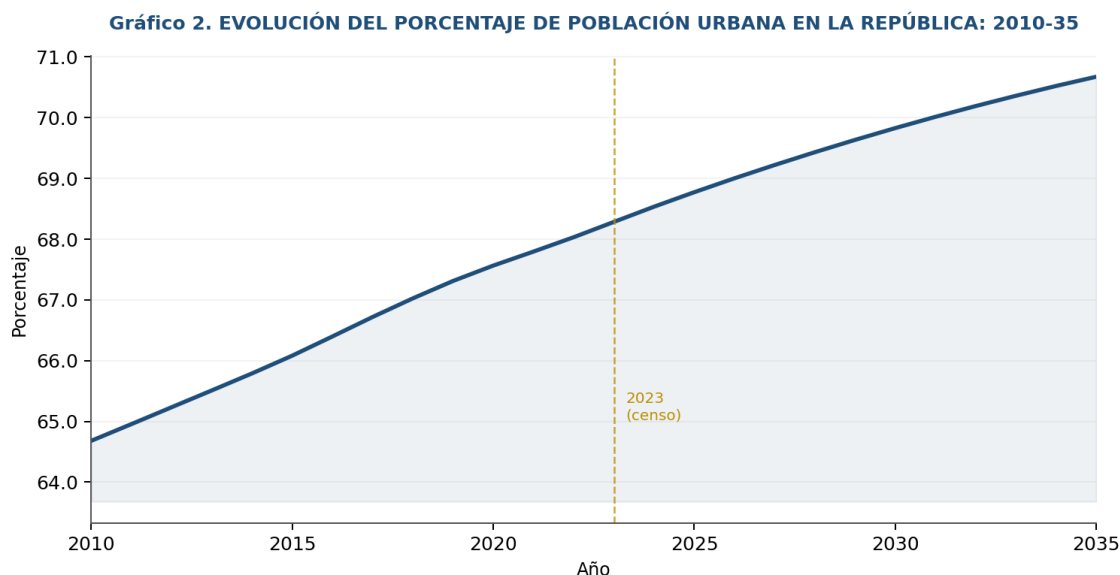

Año	Población total
2010	3,626,670
2015	3,975,949
2020	4,331,049
2023	4,496,166
2025	4,598,365
2030	4,810,744
2035	4,978,651

La tasa de crecimiento medio anual de la población nacional, calculada de forma exponencial entre pivotes, pasa de 1,65% en el período intercensal 2010 - 2023 a 0,85%

en el período proyectado 2023 - 2035. Esta desaceleración es consistente con el proceso de transición demográfica en curso en Panamá, caracterizado por el descenso sostenido de la fecundidad y el envejecimiento progresivo de la estructura por edad.

4.2 Evolución del porcentaje de urbanización nacional

A nivel nacional, el porcentaje de población urbana muestra una tendencia ascendente sostenida durante todo el período de análisis, pasando de 64,7% en 2010 a 69,0% en el censo de 2023, y proyectándose en 71,6% para el año 2035.

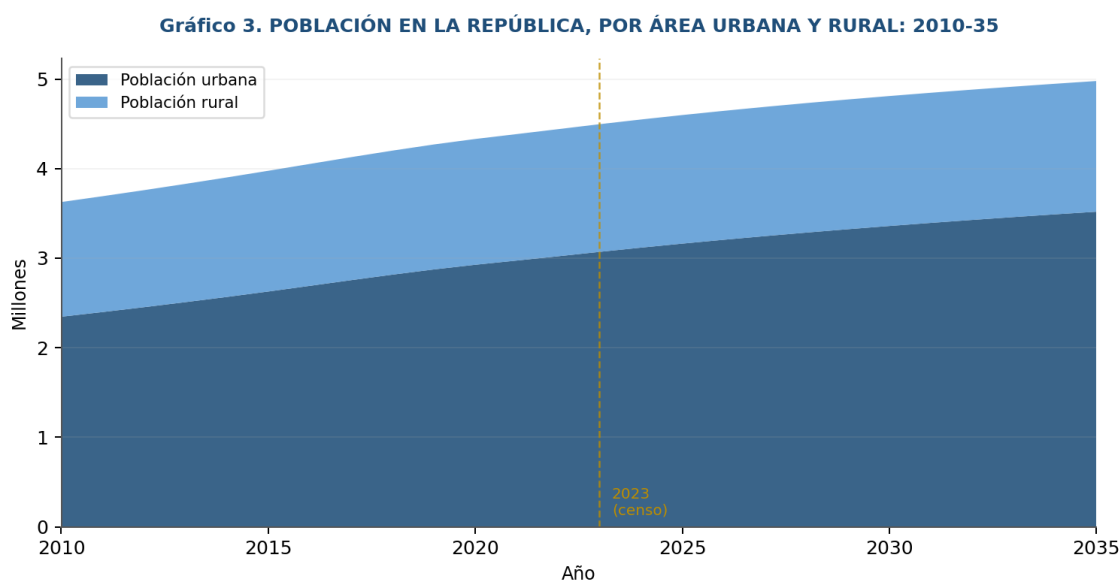

Esta tendencia es coherente con el patrón regional descrito por CELADE-CEPAL para países de nivel de urbanización intermedio (entre 50% y 70%), donde se espera una convergencia gradual hacia niveles más altos de urbanización en el largo plazo, sin alcanzar aún la fase de estabilización que caracteriza a los países con niveles de urbanización superiores al 80%.

4.2 Estructura por sexo y edad

Las proyecciones se elaboraron de forma independiente para hombres y mujeres, lo que permite capturar diferencias en el ritmo de urbanización entre ambos sexos. En el caso de Panamá, las asíntotas asignadas presentan una brecha moderada entre sexos, (20% - 85% para hombres frente a 22% - 87% para mujeres a nivel nacional), reflejando una tendencia históricamente algo más marcada hacia la urbanización en la población femenina, patrón consistente con el observado en la mayoría de los países de América Latina.

La desagregación por grupos quinquenales de edad, con detalle adicional en edades simples para los grupos 0 - 4, 5 - 9, 10 - 14 y 15 - 19 años, permite además analizar la composición etaria de la población urbana y rural en cada unidad territorial, insumo

relevante para la planificación de servicios diferenciados por grupo de edad y área de residencia, tales como educación inicial, atención primaria de salud o programas de primer empleo.

5. Resultados por provincia

5.1 Ranquin poblacional y participación relativa

Las diez provincias de Panamá presentan una distribución poblacional altamente concentrada: la provincia de Panamá y Panamá Oeste reúnen conjuntamente cerca de la mitad de la población nacional proyectada para 2035, mientras que Darién, la provincia menos poblada, representa apenas alrededor del 1,3% del total nacional.

POBLACIÓN TOTAL POR PROVINCIA, AÑOS: 2010, 2023 Y 2035

Provincia	Población Total		
	2010	2023	2035
Panamá	1,318,121	1,617,248	1,744,236
Panamá Oeste	483,527	708,611	881,592
Chiriquí	444,644	524,106	560,147
Colón	261,330	309,971	330,606
Coclé	250,619	283,357	294,946
Veraguas	248,017	283,013	285,268
Bocas del Toro	135,195	183,429	218,510
Herrera	121,159	129,637	130,201
Los Santos	96,530	104,651	106,480
Darién	49,578	56,334	62,889

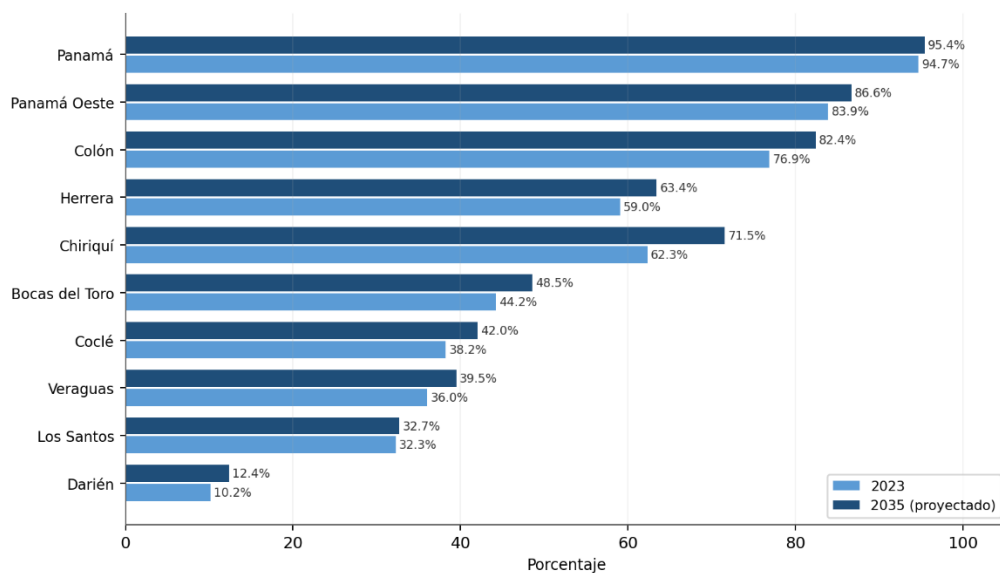

5.2 Trayectorias de urbanización por provincia

El nivel de urbanización presenta una heterogeneidad considerable entre provincias, que va desde valores superiores al 90% en la provincia de Panamá hasta niveles inferiores al 15% en Darién. El Cuadro 4 presenta el porcentaje de población urbana para cada provincia en los años 2010, 2023 y 2035.

PORCENTAJE DE POBLACIÓN URBANA POR PROVINCIA, 2010, 2023 Y 2035

Provincia	Porcentaje de población urbana		
	2010	2023	2035
Panamá	93.7	94.7	95.4
Panamá Oeste	80.2	83.9	86.6
Colón	68.4	76.9	82.4
Herrera	54.0	59.0	63.4
Chiriquí	50.3	62.3	71.5
Bocas del Toro	39.6	44.2	48.5
Coclé	34.4	38.2	42.0
Veraguas	32.5	36.0	39.5
Los Santos	31.8	32.3	32.7
Darién	8.3	10.2	12.4

Gráfico 4. PORCENTAJE DE URBANIZACIÓN POR PROVINCIA: AÑOS 2023 Y 2035

5.3 Casos destacados

Panamá

La provincia de Panamá presenta el nivel de urbanización más alto del país y de los más elevados de la región, con 93,7% en 2010, ascendiendo a 94,7% en 2023 y proyectado en 95,4% para 2035. Esta provincia concentra además el mayor volumen poblacional absoluto del país, con una proyección de 1.744.236 habitantes para 2035, lo que representa cerca de 35% de la población nacional.

Darién

Darién, como se detalla en la sección 3.2, es la provincia con el menor nivel de urbanización del país y la única que requirió un ajuste específico de las asíntotas del modelo logístico para garantizar una trayectoria de proyección suave y consistente. Su porcentaje urbano evoluciona de 8,3% en 2010 a 10,2% en 2023, proyectándose en 12,4% para 2035, un incremento moderado pero sostenido, propio de una provincia con un patrón de poblamiento predominantemente rural y disperso.

6. Resultados por comarca indígena

6.1 Particularidades metodológicas

Como se describió en la sección 2.6, las tres comarcas indígenas de Panamá, Kuna Yala, Emberá y Ngäbe Buglé, no presentan, según los criterios censales del INEC, ninguna localidad clasificada como área urbana en los censos de 2010 ni de 2023. En consecuencia, el 100% de la población de estos territorios se clasifica como población rural en la totalidad del período de proyección 2010–2035.

Esta característica distingue a las comarcas del tratamiento aplicado al resto de las unidades territoriales: mientras que en las 10 provincias se proyecta una trayectoria de cambio en el porcentaje urbano mediante la función logística, en las comarcas dicho porcentaje permanece fijo en 0% por construcción, dado que ambos pivotes censales coinciden en ese valor.

6.2 Evolución poblacional 2010–2035

A pesar de mantener un porcentaje urbano nulo, las comarcas indígenas no son demográficamente estáticas: presentan tasas de crecimiento poblacional total que se encuentran, en el caso de la Comarca Ngäbe Buglé, entre las más altas del país.

POBLACIÓN TOTAL, POR COMARCA INDÍGENA: 2000, 2010 Y 2035

Comarca	Población Total		
	2010	2023	2035
Comarca Ngäbe Buglé	169,972	244,355	309,513
Comarca Kuna Yala	36,486	37,549	39,010
Comarca Emberá	11,492	13,905	15,253

La Comarca Ngäbe Buglé, la más poblada de las tres, pasará de 169,972 habitantes (2010) a 309,513 habitantes en 2035, lo que representa un incremento de 82% en el período. Este crecimiento, considerablemente más acelerado que el promedio nacional, plantea consideraciones específicas para la planificación de servicios e infraestructura en contextos exclusivamente rurales.

7. Síntesis comparativa y conclusiones

7.1 Patrones generales de urbanización en Panamá

El análisis de las proyecciones 2010 - 2035 permite identificar un patrón nacional de urbanización sostenida, con el porcentaje de población urbana ascendiendo de 64,7% a 70,7%. Este proceso se inscribe dentro del comportamiento esperado para un país clasificado en el rango de urbanización intermedia (50% - 70%) según los criterios de CELADE-CEPAL, donde se anticipa una convergencia gradual hacia niveles más altos sin alcanzar aún la fase de estabilización característica de los países con niveles superiores al 80%.

7.2 Heterogeneidad territorial

Tras el nivel agregado nacional se encuentra una marcada heterogeneidad territorial. Las provincias de Panamá y Panamá Oeste, con niveles de urbanización superiores al 80% desde el inicio del período, contrastan fuertemente con Darién, cuyo nivel de urbanización se mantiene por debajo del 13% durante todo el horizonte de proyección. Entre estos extremos se ubican provincias con dinámicas propias, como Chiriquí, con un ritmo de urbanización particularmente acelerado en el período más reciente.

Las comarcas indígenas constituyen un caso aparte dentro de este panorama: su condición de territorios enteramente rurales, sostenida por la definición censal vigente, no impide que registren tasas de crecimiento poblacional total elevadas, particularmente en el caso de la Comarca Ngäbe Buglé.

7.2 Limitaciones del método e implicaciones para la planificación

La metodología CELADE - CEPAL, pese a sus ventajas de simplicidad y replicabilidad, presenta limitaciones que deben tenerse en cuenta al interpretar los resultados:

- El método no incorpora explícitamente los componentes demográficos, fecundidad, mortalidad y migración, de forma diferenciada por área de residencia, a diferencia de métodos más sofisticados como el método de los componentes aplicado por área.
- La comparabilidad de las cifras entre censos puede verse afectada por cambios en los criterios de clasificación urbano/rural utilizados por el INEC entre las rondas censales de 2010 y 2023, lo cual debe considerarse al interpretar las tendencias observadas en cada provincia.
- En casos extremos, como el de Darién, la aplicación mecánica del modelo requiere ajustes metodológicos específicos para preservar la coherencia de la proyección, tal como se documentó en la sección 3.2.

No obstante estas limitaciones, el carácter simple y transparente de la metodología permite su aplicación consistente a las 14 unidades territoriales analizadas, ofreciendo un insumo robusto para la planificación nacional y subnacional, particularmente en lo referido a la proyección de la demanda diferenciada de servicios según área de residencia.

**Cuadro. 1 ESTIMACIONES Y PROYECCIONES DE LA POBLACIÓN TOTAL DE LA REPÚBLICA,

Anexo

Tabla de parámetros por unidad territorial

El siguiente cuadro resume el grupo de asíntotas asignado a cada unidad territorial según su nivel de urbanización observado en el segundo pivote censal (2023), conforme a la clasificación estándar de CELADE-CEPAL, descrita en el Cuadro de asíntotas inferiores y superiores según sexo por nivel de urbanización del país (ver *pagina 3*), con la excepción del ajuste aplicado a Darién (sección 3.2).

Unidad territorial	Porcentaje de urbanización 2023	Categoría asíntota	$K_1-K_1+K_2$ (Hombres)	$K_1-K_1+K_2$ (Mujeres)
Panamá	94.7	≥ 90	33-98	35-99
Panamá Oeste	83.9	≥ 80 y < 90	26-95	28-96
Colón	77.0	≥ 50 y < 70	20-85	22-87
Herrera	59.0	≥ 50 y < 70	20-85	22-87
Chiriquí	62.3	≥ 50 y < 70	20-85	22-87
Bocas del Toro	44.2	< 50	10-80	13-82
Coclé	38.2	< 50	10-80	13-82
Veraguas	36.0	< 50	10-80	13-82
Los Santos	32.3	< 50	10-80	13-82
Darién	10.2	Ajuste específico	3-50	3-50
Comarca Ngäbe Buglé	0.0	No aplicable	—	—
Comarca Kuna Yala	0.0	No aplicable	—	—
Comarca Emberá	0.0	No aplicable	—	—

Glosario de términos

- **Asíntota:** valor límite teórico hacia el cual tiende una variable en el muy largo plazo, sin llegar nunca a alcanzarlo de forma exacta dentro del horizonte de proyección.
- **CELADE:** Centro Latinoamericano y Caribeño de Demografía, división de población de la CEPAL, responsable de la elaboración de estimaciones y proyecciones de población para los países de América Latina y el Caribe.
- **Función logística:** modelo matemático utilizado para representar procesos de crecimiento que se desaceleran progresivamente al aproximarse a un límite superior, generando una curva característica en forma de “S”.
- **Pivote censal:** valor observado del porcentaje de población urbana en un censo determinado, utilizado como punto de referencia para ajustar los parámetros del modelo logístico.
- **Población rural:** población residente en localidades que no cumplen los criterios censales de clasificación como área urbana.
- **Lugar poblado urbano:** se refiere al lugar poblado que concentra 1,500 o más habitantes y que partiendo de un núcleo central presenta continuidad física en todas direcciones hasta ser interrumpidas por terrenos agrícolas. Reúne todas o la mayor parte de las siguientes características: Servicio de luz eléctrica; acueducto público; sistema de alcantarillado; trazado de calles, varias de ellas pavimentadas y con aceras; edificios contiguos o alineados; uno o más colegios secundarios; establecimientos comerciales; centros sociales y recreativos.

En algunos casos se consideraron como lugar poblado urbano aquellos lugares poblados, barriadas o urbanizaciones que reunían la mayoría de las características antes mencionadas, aun cuando no contaban con la población.
